

Syllabus - COMP 161 - Introduction to Programming

James *Logan* Mayfield

Spring 2014

1 Logistics

- **Where:**
 - Class: Center for Science and Business (CSB), Room 323
 - Lab: Center for Science and Business (CSB), Room 309
- **When:** MWF 8-8:50, (Lab) W 2-4pm
- **Instructor :** James *Logan* Mayfield
 - *Office:* Center for Science and Business (CSB), Room 344
 - *Phone:* 309-457-2200
 - *Email:* lmayfield at monmouthcollege dot edu
 - *Office Hours:* By Appointment.
- **Credits:** 1 course credit

Note: This Syllabus is subject to change based on specific class needs. Significant deviations from the syllabus will be discussed in class.

2 Required Text

The following text is used in both this course and COMP220.

Carrano, Frank & Henry, Timothy. *Data Abstraction and Problem Solving with C++: Walls and Mirrors, 6/E*. Sixth Edition. Pearson/Addison Wesley. 2013. ISBN-10: 0132923726

This course also utilizes a fair number of web-based and free resources. A mostly complete list of these resources is included as an attachment to this syllabus.

3 Programming Environment

We'll be working with the *C++ programming language* in this course and developing our programs using the *Linux command-line environment*, *GNU GCC compiler*, and the *EMACS* text editor. Several other *Linux-based tools* will be utilized to debug and evaluate your code throughout the semester. You are expected to develop your work on the department's server, which you will access remotely using *SSH*. You may choose to do your work on your own machine. However, if you do so, it is your responsibility to properly port your work to the server and submit it properly.

All of the tools used in this course are freely available, open-source tools which you may download via the web.

3.1 SSH Clients

In order to access the department's server from your personal machine you need to obtain an SSH client. If you need any help getting an SSH client up and running on your machine, just ask. If you're running Linux or Apple's OS, then you've already got a CLI SSH client available to you. If you're on windows, then you can get the same SSH client we'll use in the lab.

- **Windows:** Putty <http://www.chiark.greenend.org.uk/~sgtatham/putty/>
- **Mac and Linux** You already have a CLI/terminal based client!

4 Description and Content

Introduction to Programming, COMP161, is a continuation of the core CS curriculum that began in COMP 160, Fundamentals of Computer Science. In COMP161, we will turn our attention to developing software systems and the craft of programming. Today's programmers face many challenges when developing software systems. This course is designed to begin to prepare students to understand and meet those challenges. One of the more crucial skills a programmer needs is the ability to critically analyze and evaluate programs and, based on their analysis, make qualitative and quantitative judgments about the quality of that program.

In COMP161, students will hone their program analysis skills through in class practice and hands on lab exercises. Homework will enforce key ideas and concepts as well as give students practice with basic language syntax and mechanics. Students will carry out two programming projects. These projects will require much more work than labs and are designed to get students comfortable working with the complexities of larger-scale software projects.

4.1 Content

Topics that will be covered in COMP161:

- Goals of Programming and Software Development
- Programming Tool-Chains
 - Text Editors
 - Compilers
 - Debuggers
 - Profilers and Analyzers
 - Version Control Systems
- The Command Line Interface (CLI)
- Imperative, Procedural Programming with C++ using:
 - recursive procedures and iteration
 - state variables
 - C++ Templates
 - basic Classes & Structs
 - C++ STL Vectors and Arrays
 - C++ STL Lists and Linked-Lists
 - CLI and File Input/Output
- Algorithm Analysis with Big-O

With respect to the required text, this course will cover appendix A and chapters 2,5,10,11 fairly closely and will look at selections from appendix B, chapter 1, and interlude 1.

5 Expectations and Policies

The expectations for students in this course are not at all unreasonable. To avoid any confusion, they are listed here. These aren't necessarily rules but rather guidelines for how you should conduct yourself in this class. Strict rules will result from these expectations and will be covered later.

- Be respectful of others. Don't create unnecessary distractions. Turn cell phones off, on silent or leave them in the dorm. Class time is not the time for checking email, surfing the web and IMing. *Come to class ready and interested in learning and if you're not, don't behave in such a way that prevents others from doing so.*
- You're in college. College is meant to provide an education. Therefore, you are, for all intents and purposes, a *professional student*. Your work should reflect a solid level of professionalism and be neat and orderly. Take the extra time to make it presentable. Crumpled papers with various liquid stains on them are not presentable. Think of the instructor as your boss and that the quality of your paycheck depends on the quality of the work. *You don't have to always love the work you do, but you should always do it to the best of your capabilities.*
- Attending class is not by itself sufficient for learning the material. You're expected to read the sections of the text as they are covered in class. You are encouraged to go beyond the material. Make use of available resources such as tutors and the high availability of your instructor. *Don't expect to get an A just by showing up and doing the least amount of work that you can.*

There are several strict policies that result from these expectations. In the case of these items, they are rules and you are responsible for understanding and abiding by them.

- *Late Assignments:* In general, late assignments will *not* be accepted. If you feel you have a justified reason for the assignment being late you may set up an appointment to meet with the instructor and plead your case. Situations beyond your control are understandable and exceptions can and will be made.
- *Attendance:* **Repeated absences and late arrivals to class will quickly reduce your participation grade to zero.** The occasional late arrival or missed class is one thing, but being habitually late and regularly missing classes is disruptive and not fair to your classmates.
- *Participation:* Cellphone usage in class is not allowed, this includes text messages. Turn off the ringers or leave them at home. Computer usage is limited to activities in support of the course. This does not include IMs, Facebook, checking email, general web surfing, poker, fantasy sports leagues, forum trolling, mine sweeper, etc. This behaviour is rude and can be a real distraction to others. Repeated failure to abide by this policy will have a negative effect on your grade.
- *Quality of Work:* There are several minimal requirements that your assignments must meet.
 - *Staples* - Assignments that take up more than one page must be stapled. Unstapled assignments will either be returned to you to be stapled ASAP or points will be deducted.
 - *Neatness* - Make every attempt to make your work neat and orderly: label problems, avoid excessive scratching out of mistakes (use pencil if you are prone to errors) and if you use spiral bound paper tear off the edges.
 - *Show Work* - Rarely are answers alone sufficient for full credit. Show your work whenever prudent. If you're unsure if work is needed, *ask!*

5.1 Collaboration

In general, you are encouraged to make use of the resources available to you. This means it is OK to seek help from a friend, tutor, instructor, internet, etc. However, *copying of answers and any act worthy of the label of "cheating" is never permissible!* It is understandable that when you work with a partner or a group that the resultant product is often extremely similar. This is acceptable but be prepared to be asked to

defend your collaborations to the instructor. *You should always be able to reproduce an answer on your own, and if you cannot you likely **do not really know the material**.*

- When assignments are meant to be done in groups, you will be directed to turn in one set of solutions per group.
- All other assignments should represent your own work and effort.

All of the Monmouth College rules on academic dishonesty apply. If you violate the rules be prepared to face the consequences of your actions.

6 Grades

This courses adheres to the Mathematics and Computer Science grade scale. Assignments and final grades will not be curved except when deemed necessary by the instruction. Percentage grades translate to letter grades as follows:

94-100	A
90-93	A-
88-89	B+
82-87	B
79-81	B-
76-78	C+
70-75	C
67-69	C-
64-66	D+
58-63	D
55-57	D-
0-54	F

You are always welcome to challenge a grade that you feel is unfair or calculated incorrectly. Mistakes made in your favor will never be corrected to lower your grade. Mistakes made not in your favor will be corrected. *Basically, after the initial grading your score can only go up as the result of a challenge.*

6.1 Grade Weights

Your final grade is based on a weighted average of particular assignment categories. You should be able to estimate your current grade based on your scores and these weights. You may always visit the instructor *outside of class time* to discuss your current standing.

- Quizzes - 25%
- Projects - 20%
- Final - 10%
- Midterm - 10%
- Homework - 15%
- Labs - 15%
- Participation - 5%

6.2 Workload

The course workload is as follows:

- 10 Labs
- 6-8 Homework Assignments

- 4-5 Quizzes
- 2 Projects
- 1 Final Exam
- 1 Midterm Exam

Homework assignments will generally be attached to labs as either a pre-lab or post-lab assignment. You can, therefore, expect them to be assigned in conjunction with the majority of the labs.

6.3 Course Engagement Expectations

The weekly workload for this course will vary by student but on average should be about 12.5 hours per week. The follow tables provides a rough estimate of the distribution of this time over different course components for a 15 week semester.

Lectures+Labs+Final		4.2 hours/week
Homework	30 hours	2 hours/week
Exam Study Time	8 hours	0.5 hours/week
Quiz Study Time	10 hours	0.6 hours/week
Projects	48 hours	3.2 hours/week
Reading+Unstructured Study		2 hours/week
		12.5 hours/week

6.4 Calendar

The following calendar should give you a feel for how work is distributed throughout the semester. *This calendar is subject to change based on the circumstances of the course.*

Week	Dates	Assignments
1	1/13 - 1/17	Lab 1.
2	1/20 - 1/24	Lab 2. Quiz 1.
3	1/27 - 1/30	Lab 3.
4	2/3 - 2/7	Lab 4. Quiz 2.
5	2/10 - 2/14	Project 1 Homework.
6	2/17 - 2/21	Project 1.
7	2/24 - 2/28	Lab 5.
8	3/3 - 3/7	Lab 6. Midterm Exam.
SPRING BREAK	3/10 - 3/14	
9	3/17 - 3/21	Lab 7.
10	3/24 - 3/28	Lab 8. Quiz 3.
11	3/31 - 4/4	Lab 9.
12	4/7 - 4/11	Lab 10. Quiz 4.
13	4/14 - 4/18	. Project 2 Homework. EASTER BREAK (Friday).
14	4/21 - 4/25	EASTER BREAK (Monday). Project 2.
15	4/28 - 5/2	Lab 11. Quiz 5.
16	5/5 - 5/7	
Final's Week	5/10 (6:30-9:30pm)	Final Exam.
